Good at time of purchase only

## WHAT IS UV FREE TANNING?

Ultra-Violet Free Tanning uses Dihydroxyacetone, also known as DHA. Our DHA solution is a self-tanning agent that is designed to provide a tanned appearance without any ultra-violet exposure, applied with the artistry of an airbrush.

## HOW DOES IT WORK?

Our Ultra-Violet free tanning solution reacts with the amino acids that are found naturally on the skin's epidermal layer, creating a tanning effect on the skin.

## WHERE DOES "DHA" COME FROM AND IS IT SAFE?

DHA is a sugar derivative that reacts naturally with amino acids in the human body. It is 100% safe as it is naturally found in the human body.

## HOW LONG WILL IT TAKE TO GET AIRBRUSHED?

To achieve a dark, sexy and even tan we estimate it will take approximately ten minutes for a full body tan, depending on desired color and body type. Facial Airbrush takes no longer than five minutes.

## HOW LONG DOES IT LAST?

Normally it only lasts 3-4 days as color it provides fades with the shedding of the stained cells, but with the use of our 10% DHA level, your tan can last up to ten days.

## WHEN WILL I SEE A RESULT?

The results are almost immediate. After just one treatment, clients report a beautiful, golden tan within two hours.

## WHAT YOU SHOULD WEAR?

The clothing you arrive in is strictly up to you. The Airbrush Mist will not stain your clothing. While being airbrushed, males must wear shorts. We recommend loose fitting clothes.

## WHAT YOU NEED TO DO

We ask that before you arrive for a Full Body Airbrush, you need to shower and exfoliate (scrub away all dead cells from your skin). This will help ensure a deeper, longer lasting tan. After you shower, NEVER apply any lotion or deodorant. This may block some of the mist and cause unwanted uneven spots.

## AFTER AIRBRUSHING, YOU SHOULD WAIT BEFORE SHOWERING

It is recommended that you wait at least six to eight hours before showering to ensure a deep, long-lasting tan.
